

## Year 3 blog

### Maths

In maths this week we have learnt to solve problems using emojis. We couldn't believe we were already learning about algebra! We had four different challenges, some of which were so tricky, we gave them to our brothers, sisters and parents to try and work out.

### English

We were learning about documentaries and David Attenborough. We found out that he uses lots of different vocabulary and fronted adverbials. We were impressed by his language and his choices of words.

### Science

In science we were making our own videos using Morfo to make plants say facts about themselves. For example, "My roots absorb water, travel through xylem and moves to the leaves". We also created games to show scientific processes that the plants use. This included pollination.

We also were lucky enough to hold some Great African Land Snails. They felt slimy, however after a while felt like a bit of a massage on our hands.
